

# Chilled drinks and the right tools always at hand while doing DIY

Would it not be great when doing DIY, refurbishing some old furniture or working on an old car to not have to run into the kitchen for a chilled drink, but to have them stored where the tools are? Cool-Tool allows exactly that; it combines a large toolbox with a small refrigerator.

Cool-Tool is a creative gimmick, says Natascha Betzgen who is responsible for marketing at Gastro-Cool. The company was founded in 2003 and focuses on refrigerators that can be used for advertising purposes. Advertising also played a role when developing the toolbox-fridge-combination. Cool-Tool can, for example, be a bonus or present for long-time customers. "When we are at a trade fair, Cool-Tool always hogs the limelight," says Betzgen.

The innovative workshop wagon comes in three colours: red, blue and black. It has three drawers and a refriger-

ator with a total volume of 50 litres. Since the workshop wagon weighing 35 kilograms has wheels, it can easily be taken where the work has to be done such as the garage, the cellar or even out into the garden. Of course, it is not wise to drink alcohol while working, but afterwards a cool draught might be very enjoyable. Of course, there is space for storing water bottles or a healthy juice. Cool-Tool contains the newest cooling technology: it has a temperature control, is free of CFCs and is overall certified energy efficient class A+.
